

## What is Erectile Dysfunction?

Erectile Dysfunction is sexual dysfunction characterized by the inability to develop or maintain an erection sufficient for intercourse. While erectile dysfunction can affect men of any age, it is most common in men over the age of 40. Studies have estimated that the number of men suffering from erectile dysfunction in the United States is over 30 million.

## Erectile Dysfunction Symptoms and Causes

The inability to achieve or maintain an erection can affect a man at any time. It can happen occasionally, or more frequently and there can be many different causes. Some of the more common reasons are:

- ➔ Low Testosterone
- ➔ Cardiovascular Disease
- ➔ Diabetes
- ➔ Prostate Issues
- ➔ Anxiety
- ➔ Nerve/Spinal Cord Damage
- ➔ Medication Side Effects
