

IV nutrition is the administration of potent blends of vitamins, minerals, antioxidants and nutrients designed to deliver dramatic results, far beyond those of oral and other traditional medications. Based on the symptoms of the patients, the physician can create a customized “drip” of IV vitamins for treatment. Due to this administration method via the blood stream, the onset of effect is usually very fast. IV nutrition is currently used to:

- ✓ Boost Energy and Performance
- ✓ Prevents Illness
- ✓ Enhance Immune System
- ✓ Age Management
- ✓ Detoxification
- ✓ Chronic Fatigue
- ✓ Decreases Plaque in Arteries
- ✓ Malnutrition
- ✓ Parkinson's disease
